Accumulating Snowfall Still Expected

Winter Weather Advisory Is In Effect For This Evening/Overnight:

- The heaviest snow is currently expected between 7 pm this evening and 3 am early Monday morning.
- Rain will change over to snow from west to east tonight. There remains plenty of uncertainty with the exact timing of the change over, but all areas are expected to see snow by midnight.
- North northwest winds of 20 to 25 mph gusting to over 35 mph
- 2-5" of snow is possible.

Issued: Sunday, December 13, 2015

Overall Forecast Confidence

Low Confidence

High Confidence

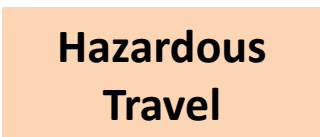

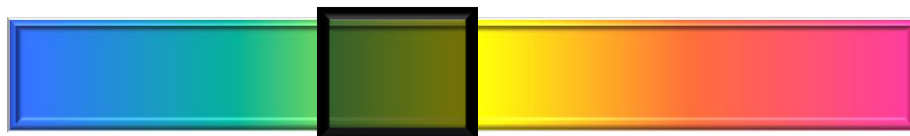

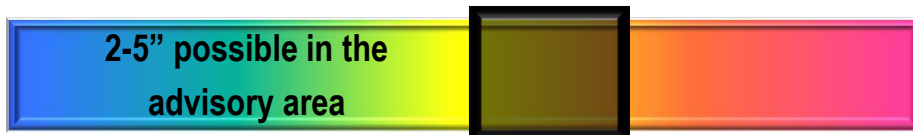

Plenty of uncertainty remains with the timing of the change from rain to snow – which will affect the snowfall amounts!

Weather-Related Risk Assessment

Low Risk

Moderate

High Risk

Snow is expected to end across the entire forecast area by noon Monday, but the wind will still be around 15 to 25 mph, gusting to near 30 mph at that time.
